

New launched edition with optimum loading capacity

The reliable R600a refrigerant that meets environmental regulations with significantly lower global warming potential. Further to that, R600a refrigerant compressor also allows a wider refrigerating system with higher capacity yet keeping noises to a minimum level.

Storage Problem?

We have Intelligent Storage and Retrieval System with telescopic runner that allows maximum storage capacity, not merely systematic but also easy retrieval of specific wine label.

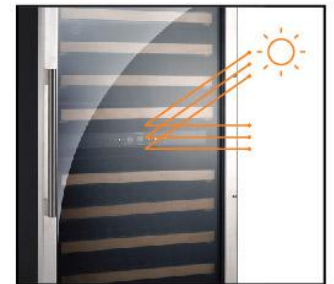

Temperature Problem?

We have single and dual zone temperature setting to suit the specific needs of your individual red and white label.

Condensation Problem?

This is normal when the warm, humid ambient air meets a cooler surface causing moisture in the air to condense and collect on the coldest surface. Consider to lower down your room temperature to overcome this.

Lighting Problem?

We have 3-layer Anti-UV Glass Protection safely guarded your wines from harmful light and UV rays.
